JS Runtime Env

memory allocation

Sync & async

Event Loop

Callback queue (async)

Micro Queue

Promise

JS code → parsing → compilation → execution

(execution)

Macro Queue

SetTimeout

Set Interval, async event

↳ Sync

↳ Promise (async, event)

↳ setTimeout

performance optimization Technique → scroll, search

↳ form events.

Throttle

↳ executes atleast once in a interval

e.g. (onscroll (infinite), mouse movements (drag & drop), screen resize.

Debouncing (Debounce function)

↳ delay function until activity stops

e.g → formvalidation (search, user input)
